Version 1/2015

Do you prefer a premium-looking nosepad on your high-end frames?

In contrast to other metal pads, titanium pads are very lightweight and corrosion-free. They can also be sandblasted or personalized by laser-engraving.

Do you want to eliminate the risk of allergies?

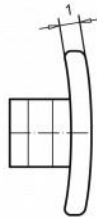

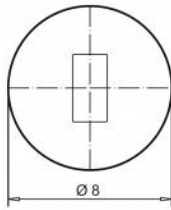

Titanium is the ideal choice in comparison to many other metals. Moreover, in comparison to plastic nose pads, its surface cannot absorb any potentially allergenic substances. Especially for elderly people facing parchment skin problems titanium pads are the ideal alternative.

**100% Made in Germany in our own facilities
and with tested materials only**
