Version 1/2014

Focusing on high comfort and customer needs, F&W offers anatomical bridges which are made of an anti-allergic crystal-clear silicone bridge with two clear polycarbonate inlays inside to be fixed to the pad arm.

These bridges are the perfect solution for those who want to feel nothing but silicone on their nose or even more interesting, for those who want only the cream of the crop for their children's frames.

Besides using the neutral version, there is the possibility for customers to personalize the pad by a logo printing.

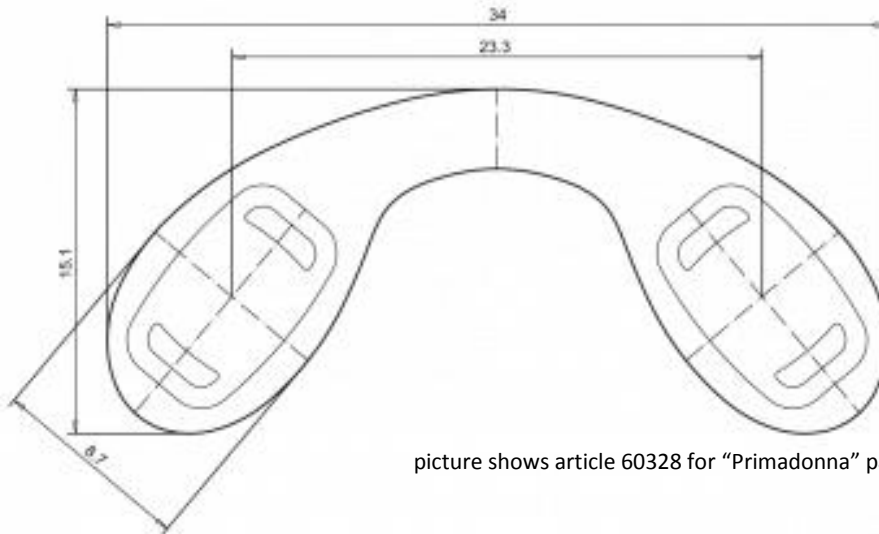

**100% Made in Germany in our own facilities
and with tested materials only**
